1. Follow National Tuberculosis Control Programme Manual 2018 for investigation of TB disease

2. Use symptom screen to rule out active TB
   - Cough, fever, weight loss, night sweats
   - Suspected or confirmed active TB
   - Prior adverse events or hypersensitivity to INH
   - Prior adverse events or hypersensitivity to rifapentine or rifampicin (3HP only)

3. Patients on TPT should additionally receive vitamin B6/Pyridoxine to prevent neuropathy

Screen for Active TB disease

- **No symptom**
  - Assess for contra-indications to 3HP
  - No contraindications → Initiate 3HP
  - Contraindications to 3HP → Eligible for 6H

- **Any one symptom**
  - Investigate for TB and other diseases
  - Other diagnosis → Treat as appropriate
  - TB → TB Treatment

Follow up and consider TPT once illness resolved

**KEY:**
- 3HP = 3 months isoniazid/rifapentine
- 6H = 6 months isoniazid
